

Home-grown

WHEN CAROL OLIVEIRA BEGAN TRAINING with the Institute for Applied Biophoton Science (IABS), she was on a personal mission to help her daughter Amy, who suffered from debilitating fibromyalgia and chronic fatigue. Now with Amy's life back on track, Carol's growing list of clients seeking biophoton therapy is simply icing on the cake.

In April 2012, after five years of futile visits to doctors, Carol found the answer Amy had been seeking right in her inbox. "I was going through an old email account. The subject line of an email from *Ode* magazine [now *The Intelligent Optimist*] caught my attention, which led me to an article about [IABS founder] Johan Boswinkel and bio-

photon therapy. Reading the article, I knew I had to do this. I didn't know how it would happen; I just knew I had to do it. And I'm so glad I did."

She called the IABS immediately and began their Introduction to Biontology course just a month later, traveling from her home in Golden, Colorado to Mill Valley, California for the 5-day hands-on training in May 2012. "I was so nervous on the first day, I was sick to my stomach. So much was riding on this course. Anyone can do it, but it requires a will, a purpose greater than yourself."

For Carol, that purpose was Amy, but as she began to master the techniques, she

realized how many other people she could help. "Other people had told me before that I was a 'healer,' although I'd never envisioned myself with my own practice. But after several months of training, I remember telling my daughter, 'My whole life has prepared me for this.' I began to notice how many people are sick, *really* sick. Our culture has normalized not feeling well. We're taught to believe that this is how life is supposed to feel, but it's not."

Although she had no medical background, Carol had always naturally leaned toward alternative medicine for herself and her family, and over the years had visited acupuncturists, chiropractors and homeo-

healing

paths. "In that sense Biontology was in line with methods I was familiar with—it was like homeopathy delivered through biophoton light rather than the digestive system."

She has since attended several additional hands-on sessions, finding that learning from multiple instructors has given her a broader understanding. "Biontology is a blend of art and science. There's a feel to measuring the [meridian] points." Unlike Western medicine with its thousands of diagnoses, biophoton therapy focuses on 12 organ systems, "Biontology simplifies things in an elegant way. We want to find the remedy that corrects the most disturbances at once—this allows me to dig deeper into the problem. By treating the root cause, people can get better faster."

Amy had been living at home, unable to hold a job or even drive. But biophoton therapy began to bring her symptoms under control, and eventually she was ready to live on her own again. As Amy recovered, Carol could focus more on the many people in her area seeking a biontologist.

Although she's never advertized, the treatment room in her home has been busy from the start. "People love the treatments. They feel more relaxed when they leave, and over time just keep feeling better and better." She likes the one-on-one time she spends with her clients, the noninvasiveness of the method, and especially the results she's witnessed.

Our culture has normalized not feeling well. We're taught to believe that this is how life is supposed to feel, but it's not.

"My first client had lots of nagging symptoms, including chronic pains and trouble sleeping. They were all gone after five sessions." Her second client's results were also remarkable. "She was scheduled for surgery to remove her parathyroid gland to treat severe osteopenia [low bone density]. She only had biophoton treatment for a couple of weeks when her surgeon called and cancelled her operation, because her blood tests showed a 25% improvement."

Many of her clients are referred to her through the IABS or find her through their website, biontology.com. "There are a lot of desperate people looking for help. Most of the people who contact me have already exhausted everything in Western medicine and other alternatives. It isn't easy to find a biontologist."

But Carol hopes to change that. "One of my goals for next year is to get the word out more. As more people learn about Biontology, I think that all practitioners will be ex-

tremely busy. We are exposed to so much stress—from our corrupted food supply and toxic environment to the 'work culture' we live in and the social masks we wear—that people have an uphill battle to getting well. When the body is broken down, it's vulnerable to other disturbances."

"We see miracles—it's so satisfying—soul-satisfying—to participate in something that is life changing for people." For Carol, who has gone from caring for her ailing daughter to a running a thriving business in less than two years, biontology has not just changed the lives of her clients, but her own. **IB**
